

Drinking Water Filter Reverse Osmosis

FILTERIFIC

UNDER SINK 4 STAGE 50GPD

Reverse Osmosis systems are well known to be top of the range in drinking water filters:

Stage 1- Removes dirt and rust. 1 micron polyspun sediment filter cartridge.

Stage 2- Removes chlorine, lead, bacteria, cysts, bad taste and odour. 0.5-micron activated carbon filter cartridge. Tested and certified by the NSF. (National Sanitation Foundation-International)

Stage 3- RO TFC Membrane, fine filtration can produce up to 200 litres per day. NSF tested.

Stage 4- Polishing filter; granulated active carbon GAC inline filter to improve the taste and odour.

Water Storage Tank- 12 litre non-rusting polypropylene.

Running cost is as follows, pre and post-filtration cartridges need replacing every 12 months \$95.00 total. Membrane needs replacing approx. every 4 years \$110.00; dependant on usage and water quality.
